

ADRIAN JAMES C. DAGATAN

Data & Insights Analyst | Monetary and Financial Economics Graduate, Cum Laude

adrianjames.dagatan@gmail.com • 0960 867 5863 • Davao City, Philippines

PROFILE

Economics graduate who genuinely likes sitting with a messy dataset until it starts making sense. 1+ years of hands-on experience turning raw numbers into decisions, automating reporting for an Australian e-commerce brand, running regression models for financial researchers, and asking "why" until the pattern holds up. Lives comfortably inside a spreadsheet, picks up new tools fast, and cares more about getting the answer right than getting it fast.

SKILLS

Spreadsheets & Data Tools: Excel (advanced formulas, pivot tables, Power Query workflows), Google Sheets
Analysis & Statistics: Regression Analysis, Statistical Modeling, Hypothesis Testing, Time Series Analysis, Econometrics
Programming: R, Python, Stata, M Language (Power Query), SQL
Dashboards & Reporting: Power BI, Tableau, Google Data Studio

PROFESSIONAL EXPERIENCE

Reports Associate (Data Analyst) | Crylls Inc. | Mills Brands AU (e-commerce)

Apr 2026 – Present

- Started out on Warehouse reporting alone; within months was trusted to build and maintain dashboards for four more departments — Service Centre, Quality, After Sales, and Customer Service — as the company's sole Reports Associate.
- Automated recurring stock and warehouse reports, cutting manual reporting time from about 6 hours to 2 per cycle and reducing stock discrepancies by roughly 50%, which freed up time for deeper ad hoc analysis.
- Introduced SQL-based analysis to Warehouse operations — the first time the team queried data directly instead of relying on manual spreadsheet pulls.
- Maintain 30+ recurring reports and 5+ live dashboards, working directly under both the Warehouse Operations Manager and the After Sales Quality Lead.
- Fast-tracked to regularization within four months, ahead of the standard timeline.

Freelance Statistician & Data Analyst | Multiple Clients (USeP)

Mar 2025 – April 2026

- Provide statistical analysis and write-up support to MBA and DBA candidates, applying Structural Equation Modeling, linear regression, and Poisson regression to build the analytical framework for their research.
- Translate regression output into plain language so candidates can defend their results confidently — a coefficient means nothing if you can't explain what it's doing.

Project Intern | Socio-Economic Research and Data Analysis Center (SERDAC) Mindanao – USeP Main

Jul 2025 – Sep 2025

- Built a Python transcription tool using OpenAI's Whisper that cut transcription time from about 6 hours to under 2 per audio file.
- Cleaned and analyzed research data in R, Excel, and Python, and built visualizations that surfaced the findings that actually mattered.

Research Assistant | Coreway Consultancy

Feb 2025 – Jun 2025

- Cleaned and analyzed electoral and demographic datasets in R, then built an interactive Tableau dashboard stakeholders used to track voter trends and inform campaign strategy.

FEATURED PROJECT

Undergraduate Thesis | Regime-Dependent Dynamics of Macroeconomic Fundamentals and Credit Delinquency in the Philippine Financial System: A Markov-Switching Regression Approach

- Tested whether the relationship between macro indicators and credit delinquency actually changes across economic regimes, using a Markov-switching regression to capture the nonlinear pattern that a standard linear model would have missed.

Freelance Project | Analyzing Poverty: The Case of the Island Garden City of Samal, a Doctor of Business Administration Dissertation

- Analyzed household income and poverty data using descriptive statistics, Poisson regression, and Logit regression in R.
- Mapped poverty incidence across the Island Garden City of Samal using GIS-based visualization.
- Examined spatial and socioeconomic patterns of poverty to support evidence-based policy analysis.

Research Assistant Project | Electoral Preference Dashboard for 2025 Local Elections in Davao Region

- Led an end-to-end research project covering data collection planning, budgeting, cleaning, analysis, and reporting.
- Cleaned and analyzed electoral preference data in R, then consolidated key results into an interactive Tableau dashboard.
- Developed a stakeholder-facing dashboard to present election trends and support company decision-making.

EDUCATION

BS Economics, Major in Monetary and Financial Economics | Cum Laude, 2026

University of Southeastern Philippines, Obrero, Davao City

CERTIFICATIONS

- Google Data Analytics Professional Certificate, Coursera (2023)
- Excel Skills for Business: Essentials & Intermediate, Coursera (2023)
- Intermediate R Programming, DataCamp (2024)
- Time Series Analysis in R, DataCamp (2025)
- Intermediate Python Programming, DataCamp (2025)
